EDUCATION

VIT Bhopal University

B.Tech, Computer Science & Engineering

CGPA: 8.11 / 10

Expected Oct 2026

SKILLS

Languages: Python, SQL | **Data Analysis & Visualization:** Excel, Power BI, Pandas, NumPy, Matplotlib, Seaborn | **Machine Learning:** Supervised Learning, Binary Classification, Logistic Regression, KNN, Naive Bayes
Tools & Platforms: MySQL, Git, GitHub, VSCode, Jupyter Notebooks, AWS, Snowflake
Core Competencies: EDA, Data Cleaning & Preprocessing, Data Wrangling, Descriptive & Diagnostic Analytics, Statistical Analysis, Business Insight Generation, Model Evaluation (Precision, Recall, F1-score)

EXPERIENCE

Web Development Intern | Prodigy InfoTech (Remote)

May 2024 - June 2024

- Developed 5 full-stack web applications using HTML5, CSS3, and JavaScript, including a responsive landing page, stopwatch application, Tic Tac Toe game, personal portfolio website, and dynamic weather app with real-time API integration
- API Integration and Core JavaScript: Integrated the OpenWeather API with fetch requests and JSON parsing for real-time data, while applying core JavaScript concepts like DOM manipulation, event handling, and error handling for interactive, dynamic UI updates.

PROJECTS

Karnataka Agriculture Data Analytics Pipeline | SQL, AWS, Snowflake, Power BI, Feature Engineering [GitHub](#)

- Built a scalable data pipeline integrating **AWS S3** and **Snowflake** to process **3,000+ agricultural records** across **11 districts**, utilizing **automated ETL workflows** and **external stages** to reduce manual data handling by **90%**.
- Developed a centralized **Snowflake data warehouse** featuring **10+ SQL transformation steps** to model dimensional data (Year/Rainfall attributes) and enforce data consistency, achieving sub-second query performance for analytics.
- Designed interactive **Power BI** dashboards with **6+ DAX measures** and dynamic filtering for **13 crop varieties**, uncovering actionable insights on **20% yield optimization** opportunities and regional rainfall variability.

Credit Card Financial Intelligence System | Power BI, SQL, DAX, Data Modeling, ETL

[GitHub](#)

- Engineered an interactive **Power BI** dashboard integrating **PostgreSQL** with over **667K transactions** and **\$57M in revenue**, utilizing complex **SQL** queries for seamless **ETL** and real-time operational monitoring.
- Architected a **relational data model** and developed advanced **DAX measures** to enable granular **customer segmentation**, **delinquency tracking**, and **cohort analysis**, reducing manual reporting efforts by **80%**.
- Derived **actionable business insights** identifying a **28.8% WoW revenue surge** and pinpointing key geographic markets (**TX, NY, CA** driving **68%** of revenue), directly empowering stakeholders with data for **strategic decision-making**.

CreditWise – ML-Powered Loan Eligibility Predictor | Python, Scikit-Learn, NumPy, Pandas, Seaborn

[GitHub](#)

- Architected an end-to-end **supervised machine learning pipeline** for loan eligibility prediction, benchmarking **Logistic Regression, KNN, and Naive Bayes** to automate decision-making.
- Conducted in-depth **Exploratory Data Analysis (EDA)** using **Pandas** and **Seaborn** to uncover **feature correlations (\$r\$)** and distribution patterns, informing robust data preprocessing strategies.
- Engineered predictive features via **One-Hot Encoding and Standardization**, optimizing model performance to achieve **88% accuracy** and **0.81 F1-score** with the Logistic Regression classifier.
