EDUCATION

VIT Bhopal University

B.Tech , Computer Science Engineering

CGPA: 8.09 / 10

Expected Sep: 2026

SKILLS

Languages: Python, Java, SQL | **Data Analysis & Visualization:** Excel, Power BI, Pandas, NumPy

Tools & Platforms: MySQL, Git, GitHub, VSCode, Jupyter Notebooks, Google Colab, AWS, Snowflake

Core Competencies: OOPs, Data Wrangling, Statistical Analysis, EDA

EXPERIENCE

Web Development Intern | Prodigy InfoTech (Remote)

May 2024 - June 2024

- Developed 5 full-stack web applications using HTML5, CSS3, and JavaScript, including a responsive landing page, stopwatch application, Tic Tac Toe game, personal portfolio website, and dynamic weather app with real-time API integration
- API Integration and Core JavaScript: Integrated the OpenWeather API with fetch requests and JSON parsing for real-time data, while applying core JavaScript concepts like DOM manipulation, event handling, and error handling for interactive, dynamic UI updates.

PROJECTS

Karnataka Agriculture Data Analytics Pipeline | SQL, AWS S3, Snowflake, Power BI, DAX

Nov 2025

- Architected end-to-end cloud data pipeline processing 5,000+ agricultural records across 11 Karnataka districts using AWS S3, Snowflake, and Power BI; automated ETL workflow with storage integration, external stages, and SQL transformations reducing manual processing by 90%
- Engineered data warehouse solution in Snowflake with 10+ SQL transformation scripts, creating analytical dimensions (Year Groups, Rainfall Classifications) and applying data quality validations; achieved sub-second query performance with 98% data accuracy
- Developed interactive Power BI dashboards with 6+ DAX measures and dynamic filtering across 14 crop varieties; delivered insights identifying 15-20% yield improvement with drip irrigation and 40% rainfall variation across regions, enabling data-driven agricultural planning

Credit Card Analytics Dashboard | Power BI, Power Query, PostgreSQL, SQL, DAX

Oct 2025

- Developed an interactive Power BI dashboard integrating over 667K credit card transactions and \$57M in revenue from a PostgreSQL database, enabling real-time monitoring of operations and customer metrics across multiple dimensions.
- Designed and implemented a relational data model (3-table architecture) for high-performance analytics, including demographic and transaction segmentation, delinquency tracking (6.06 % rate), and automated KPI calculations via advanced DAX measures..
- Delivered actionable business insights—such as cohort analysis, revenue trend identification (28.8 % WoW growth), and geographic performance mapping (68 % revenue from TX, NY, CA)—empowering strategic decisions for marketing, risk management, and product optimization.

UrbanMart Sales Dashboard | Power BI, Power Query, DAX, Excel/CSV Data Handling

Oct 2025

- Developed an interactive Power BI E-commerce Sales Dashboard for UrbanMart, utilizing Power Query (ETL) and DAX (measures like AOV: 121K, Profit: 37K), providing real-time visibility into 438K in sales and 5,615 units sold. The solution centralized performance monitoring, reducing analysis time from hours to seconds.
- Delivered actionable strategic insights that drove optimization across sales and inventory: uncovered a dominant 44 % Cash on Delivery (COD) payment preference; identified the high-volume Clothing category (63 % share) and the most profitable sub-category (Printers); and highlighted the top sales region (Maharashtra), informing marketing focus and pricing strategy.
